

# About Meta

The average employee wastes four hours each week searching for and recreating lost documents. Finding files should be as simple as a Google search, no matter where they're stored.

Meta allows you to seamlessly search for, access, and share files across all cloud platforms and devices. Our search engine learns and improves itself as you interact with it, leveraging natural language processing and automatic tagging to provide accurate results every single time. We just closed an early stage funding round and are excited to add front end experience to the core team.

## About You

You write fast, beautiful JavaScript to create simple and powerful user experiences. You translate visual designs into fully working web pages, and edit the HTML, CSS, and Javascript for existing page templates. You build and work with high-performance, reusable code for UI components and your work is always modular and scaleable.

### Requirements

- Familiarity with modern Javascript frameworks such as EmberJS or AngularJS
- Excellent communication and discussion skills
- A BA/BS degree in Computer Science, Mathematics or Engineering, or relevant work experience
- Familiarity with working in an agile development environment
- Flexibility, adapting to changing priorities and learning new languages as necessary

## Job Overview

Meta consists of a fast, responsive web interface and lightweight local client applications. We use natural language processing and probabilistic classifiers to automatically generate and apply tags to files based on content and user habits. Speed is critical, Meta's web interface must feel as though it is an extension of your operating system.

Our backend is microservices-based and written in Go and Python, running on the Google Cloud Platform. The local clients are native applications that interface with our web services to facilitate workflow integration. This project presents an opportunity for you to take the lead in creating a brand new file interaction experience.

## We Offer

- A great product supported by prominent investors and enthusiastic early adopters
- Ground floor entry to an exciting project on which you will have a huge impact
- A friendly, challenging, and collaborative work environment
- Compensation commensurate with experience and ground floor stock options!
